User Testing With AI

Experience

Sensigo Design & Engineer Intern
New York Oct 2025-Present

- Created the data ingestion pipeline for a RAG system to produce more reliable outputs for technicians working across multiple document sources
- Drove better product outcomes by translating document structure into ingestion requirements that improved AI-generated responses. This improved accuracy of document retrieval by technicians in their workflows.
- Designed Marketing graphics, including the booth design for the biggest Car Tec convention.

Synechron 3D Design & Engineer Intern
New York May 2024-May 2025

- Designed and developed a 3D interaction design pattern working alongside the VP, that was leveraged by Synechron teams
- Worked collaboratively with programmers and designers across Synechron, including the Director of Design, building code for their sales teams
- Designed and developed multiple modular interfaces using Javascript and Blender.
- Demo'd the usage of this design to the CEO and Senior leadership
- Developed user testing and research modules to create an interface that can be easily used internally by employees

MedRcm Web Design Intern
San Jose Jun 2023-Aug 2023

- Designed a homepage website where I worked with the CEO, understood his vision and delivered a new design to drive better engagement and clarity for MedRcm customers.
- Followed a web guideline to produce content that shared MedRcm vision and values.
- Contributed to the creation of design systems to be used by future designers. Collaborated with client to help find visual components that fit within the budget.
